

## Our Sourcing & Production Process

At **China Sourcing**, we follow a structured and transparent process to ensure your product is sourced and manufactured to the highest standards – on time and within budget. Below is a detailed overview of each step, including estimated timeframes:

### ●●● Step 1: Product Requirements & Feasibility

Estimated time: 1–2 business days

We begin by collecting and reviewing your product requirements, including specifications, intended use, target price, and quantity. Our team then assesses market feasibility – ensuring the product can be sourced at your target quality and price and advises on any necessary adjustments before we begin supplier outreach.

### ●●● Step 2: Supplier Identification & Evaluation

Estimated time: 2–3 business days

Using our network and sourcing expertise, we identify potential suppliers that align with your needs. We perform background checks, verify factory capabilities, and shortlist the most suitable options. Requests for quotation (RFQs) are sent, and we analyze their responses for cost, lead time, and compliance.

### ●●● Step 3: Sample Production & Approval

Estimated time: 2–4 weeks (varies by product)

Once a supplier is selected, we initiate sample production. We coordinate with the factory to ensure the samples meet your specifications. After receiving the samples, we conduct detailed inspections and, if necessary, suggest revisions. This step continues until you are fully satisfied and give your approval.

### ●●● Step 4: Price & Contract Negotiation

Estimated time: 2–3 business days

We negotiate with the chosen supplier to secure optimal pricing, payment terms, production schedules, and compliance with your packaging and labeling requirements. A formal contract is prepared and signed to ensure mutual clarity and protection.

### ●●● Step 5: Production & Quality Control

Estimated time: 4–5 weeks (depending on product complexity and order size)

After the contract is finalized and the deposit is paid, production begins. We monitor progress closely, maintain communication with the factory, and conduct in-line and final quality inspections to ensure everything meets agreed standards before shipment.

### ●●● Step 6: Logistics & Delivery

Estimated time: 2–6 weeks (depending on shipping method and destination)

Once production is complete and the goods pass inspection, we manage all aspects of logistics—including export documentation, freight forwarding, and customs clearance. We provide regular updates and tracking until the products are delivered to your destination.
